

ICT3411 – CAT 1(HTML & CSS)

Instructions:

- Answer all questions in all the sections

Section A: Short Answer Questions (10 Marks)

1. What is the primary purpose of the `<!DOCTYPE html>` declaration in an HTML document? (2 marks)
2. In HTML, what is the difference between an **ordered list** and an **unordered list**? Provide an example of each using the correct HTML tags. (2 marks)
3. Explain the difference between the **GET** and **POST** methods in the context of an HTML form submission. (2 marks)
4. Write the HTML code to create a hyperlink that navigates to `https://www.example.com` and displays the text "Visit Example". (2 marks)
5. What are the three ways to apply CSS to an HTML document? Name each method. (2 marks)

Section B: Code-Based Questions (16 Marks)

1. Create a complete HTML table with a caption, a header row with three columns (Name, Age, City), and two rows of data. The first data row should be John, 30, Lusaka, and the second should be Chido, 25, Harare. (4 marks)
2. Write the CSS code to style a `<div>` element with the ID `box`. The div should have a background color of `#f0f0f0`, a border of `2px solid #333`, a padding of `20px`, and a margin of `10px`. (4 marks)
3. Using only CSS selectors, write the code to:
 - Select all `p` elements and change their font size to `16px`.
 - Select the `h1` element with the class `main-title` and change its color to blue.
 - Select all anchor tags (`a`) that are direct children of a `nav` element and remove their underlines. (4 marks)
4. Write the HTML code for a form that collects a user's **name** and **email address**. The form should have a label and input for each field and a **submit button**. The form's action attribute should point to `/submit_form.php` and its method should be `post`. (4 marks)

Section C: Scenario-Based Questions (24 Marks)

1. You have an existing HTML file named index.html with a <div> element that has the class container. Inside this div, there's an h1 element with the ID main-heading and a p element.
 - Write the complete index.html file, ensuring it links to an **external stylesheet** named styles.css.
 - Write the complete styles.css file to achieve the following:
 - The .container class should have a max-width of 800px, be centered horizontally using margin: 0 auto;, and have a background-color of #fff.
 - The #main-heading should be color: #333; and text-align: center;.
 - The p element should have a font-family of Arial, sans-serif and a line-height of 1.5.
2. A client wants a horizontal navigation bar at the top of their website.
 - Write the HTML code for an unordered list () with three list items () for Home, About, and Contact.
 - Write the CSS code to transform this list into a horizontal navigation bar. The code should:
 - Remove the default list bullets.
 - Make the list items display horizontally.
 - Add padding to the list items for spacing.
 - Change the color of the link text to white and remove underlines.
